

MNIST | ViT-Small | classification error by corruption

Each MNIST-C corruption: its official fixed severity | heldout_val | training N = 55,000

— Grayscale baseline —●— Train sparse; test at same sparsity - -□- - Train dense; test sparse

Lines: mean over seeds 0, 1, 2; bands: ± 1 sample SD. Compact inference at 0% can remove naturally empty patches.

MNIST | Swin-Tiny | classification error by corruption

Each MNIST-C corruption: its official fixed severity | heldout_val | training N = 55,000

— Grayscale baseline — Grayscale contrast ● Train sparse; test at same sparsity -□- Train dense; test sparse

Lines: mean over seeds 0, 1, 2; bands: ± 1 sample SD. Compact inference at 0% can remove naturally empty patches.
